

BELGIUM

and its collaboration with the European Commission's science and knowledge service

Who are we?

The Joint Research Centre (JRC) is a department of the European Commission. Our mission is to support EU policies with scientific evidence throughout the entire policy process. We are independent of national, commercial or stakeholder interests.

Our 2 800 staff are based in Belgium, Germany, Spain, Italy and the Netherlands. In addition to performing our own research, we make sense of collective scientific knowledge from multiple sources for smarter EU policies. Capacity building is one of our key roles. We often work in partnerships with universities, government offices, agencies and stakeholders.

Joint Research Centre

JRC priorities

Most of our scientific work is undertaken in direct support to EU policies. We add value by providing knowledge or services that others are less well placed to provide. And we strive for excellence in all our activities.

In carrying out our work, integrity is a core value: in our approach to science, in the way we treat people, and in avoiding conflicts of interest. We strive always to deliver on our commitments, to promote an open exchange of knowledge and to foster innovation.

Our scientific work covers a wide range of EU policy domains: energy and transport; sustainability and climate; migration; economic questions; education and employment; food, nutrition and health; digital transformation; and innovation. We endeavour to address new societal challenges as they emerge.

Examples of cooperation

Joining forces to detect explosives

At its site in Geel, the JRC developed a spray to train dogs to detect TATP, an explosive that terrorists often use. Beforehand, police had to train dogs at special, strictly controlled training sites. With this new spray, dogs can now be trained to detect TATP at busy airports and railway stations. The JRC has also developed guidance on training dogs to detect explosives based on best practice that was shared by the Belgian Federal Police's dog team.

Bringing new technologies to market, fast

Imec, the Leuven-based innovation hub for nano-electronics and digital technologies, and the Flemish institute for technological research, VITO, are members of the JRC-run European Technology Transfer Offices Circle. Together with the JRC and other members they designed a new financial facility to shorten the time to market of innovation.

Preventing customs fraud in cargo traffic

Customs authorities in Belgium have carried out pilot testing of software developed by the JRC for monitoring cargo traffic. The software allows for systematic analysis of the movement of cargo containers and import declarations, so it helps prevent customs fraud. Based on the positive outcome of the pilot testing, this type of analysis is now applied to all EU imports by maritime containers.

Working together?

USING OUR LABS AND INFRASTRUCTURE

Since 2017 the JRC has opened up 16 of its physical research infrastructures to academia, research organisations and industry (including small and medium-sized businesses). There are opportunities for scientists to work and receive further training in JRC laboratories dealing with nuclear safety and security, chemistry, life sciences, physical sciences, ICT, and 'foresight' (the branch of scientific research that explores how the future will look).

SMART SPECIALISATION

The JRC hosts the Smart Specialisation Platform, which helps European countries and regions identify which research and innovation areas to invest in. The Platform takes into account a country or region's existing strengths and upcoming challenges. We have provided science-based advice for policymakers, businesses and research institutions. And we have developed more than one hundred Smart Specialisation Strategies for various European regions and Member States, e.g. for the agri-food and energy sectors. The Platform has helped foster many partnerships both within the EU and beyond.

KNOWLEDGE CENTRES AND COMPETENCE CENTRES

The JRC hosts several Commission Knowledge Centres and Competence Centres. These Centres bring together experts, stakeholders and knowledge from both within and outside the European Commission. Knowledge Centres are built around topics, while Competence Centres focus on analytical tools. Together, they inform policymakers, stakeholders and the general public about the latest scientific findings that are relevant for policy. They provide contextualised evidence, reviews, data analysis and data visualisation.

JRC SUPPORT FOR **STANDARDISATION**

Standardisation and harmonisation promote innovation and competitiveness. They also build consumer trust and are essential for the European single market. For these reasons, more than 70 % of the JRC's projects involve work on standardisation and harmonisation. The JRC also participates in more than 160 technical committees linked to standardisation organisations. The JRC also plays a key role in the development of reference materials. The JRC carries out research to lay the scientific foundations before a standard is adopted, for example, by developing analytical methods.

USING OUR SITES AS LIVING

The JRC is offering startups the

chance to use 'living labs' at its

sites in Ispra, Italy, and Petten,

the Netherlands. We welcome

applications from those working in

the fields of mobility (ride sharing,

last mile delivery, robotaxis) and

digital energy (smart meters and

sensors, data analytics). Interested

parties wanting to test their tech in

a controlled, city-like environment

BRIDGING THE GAP BETWEEN SCIENTISTS AND POLICYMAKERS

The JRC regularly organises or facilitates events known as 'Science meets Regions' and 'Science meets Parliaments'. At these events, scientists and policymakers are brought together to learn about each other's challenges, tackle issues specific to a given region or country, build relationships and promote a culture of evidence-based policymaking.

ACCESSING OUR DATABASES **AND MODELS**

In line with our values of openness and transparency, we grant access to the JRC's services, databases and tools, including more than 100 models.

COLLABORATIVE DOCTORAL PARTNERSHIPS

In 2016, the JRC launched the Collaborative Doctoral Partnerships programme to establish strategic cooperation with institutions of higher education that have excellent research credentials and an international reputation. The programme is designed to train a new generation of doctoral students in specific scientific fields, with a focus on the science- policy interface.

with access to state-of-the-art labs, technical support and scientific ■ A Section Action and Action an expertise should apply here.

Did you know?

The JRC and Belgian partners have more than 30 joint projects in topics as diverse as agricultural policies; data-format and software; emergency conditions; freshwater; nuclear emergencies; soil quality and land evaluation.

KU Leuven and the University of Hasselt run with the JRC joint Doctoral programmes on soil and land use, bio-economy and forest, machine learning, genomics, bioinformatics, nuclear decommissioning and waste management. The JRC supported 2 'Science meets Regions' events: an innovation camp exploring urban development in Ghent and a conference on artificial intelligence which took place in the Flemish Parliament in Brussels.

The Belgian member of the JRC Board of Governors is Margarida Freire, who works at the Politique Scientifique Féderale. Since 2005, the JRC is working with the Belgian Nuclear Research Centre on nuclear research and safety; sharing best practices with other EU countries to reduce radioactive waste.
