

Global Summit on Regulatory Science 2019
Nanotechnology and Nanoplastics

Training opportunities

Short course

Use of Reference Materials and the Estimation of Measurement Uncertainty

On **27 September 2019**, back-to-back to the GSR19, the **EC JRC in Ispra** (VA, Italy) offers a short course on the 'Use of Reference Materials and the estimation of measurement uncertainty'.

This course provides participants with the theoretical basis for the estimation of **measurement uncertainty** and establishment of **traceability**, which are essential for the evaluation of measurement results. **Reference materials** are key tools for achieving traceability of measurement results, proving the **accuracy of methods** and demonstrating the **proficiency of laboratories**. Examples for the proper selection and use of reference materials in the field of nanoparticle characterisation will be given.
