

# The European Commission's science and knowledge service

Joint Research Centre

## Q&A

## start of the Q&A: COM questions

What was meant by:

- Flexibility on rules/thresholds/tolerance ?
- Fairness?
- Different zones within the territory?

## Wrap -up

10 yrs LPIS QA workshop, Varese, 10 April

## WS content

1. clarification of some frequently asked ETS details
2. examples of LPIS QA follow-up and remedial action plans by MS
3. working group discussion on identified LPIS/LPIS QA challenges

## State of LPIS management

1. system-wide process (where not?)
  2. financial correction is key motive
  3. resources/sources not an issue
  4. role of farmer becomes prominent
- but:
- “bits and pieces”: the slivers, elongated and small parcels remain problematic
  - fuzzy boundaries
  - the land use (management practices) on PG is confusing

## State of LPIS QA

1. no existential problems
2. financial risk perceived very relevant
3. detected problems mostly accepted (one can disagree with the expectations or need for action but there should be no "false non-conformities")
4. still some local ETS-"dialects", impact not obvious but:
  - some tuning desired, where?
  - what about the GAEC LF features?
  - the role of LPIS > < GSAA (i.e. area tool or farm tool)?

## MS requests @COM for

1. LPISQA stability
2. WikiCAP examples and clarification (FSM, HV, LF, ...)
3. LPIS QA portal upgrade (interactive tool and feedback rather than delivery)
4. automatic screening methodology & standardized tools
5. acceptance by the auditors
6. timeliness
7. tuning of the LPIS QA methodology (thresholds, small parcels) → contradicts 1.

## To follow-up (COM perspective)

- where the LPIS QA is seen in isolation.
- cadastral interference
- prepare for the major disruption via CAP2020
- how does the TG MLL fit in this → should there be guidance on spatial interoperability.

# Thank you!

Have a nice trip back
